I assume you are a medical doctor and that disclosure of material information is important to your patients.

With that said, the truth has been found to be most advantageous to the well being of humans; and the same can be said about withholding information can work to the detriment of a patient's well-being.

It is true that I "solicited" you in an effort to get the information out there about why it is that medical doctors in the US earn so much and the health of more than 95% of Americans is worse than that of the British, who are not in the best of health, not even close.

Suffice to say I will be taking your name off my email list but you would agree that I would be doing the next generation of truth seekers a great favor by placing your name on my \$ hit list which you can access from the homepage of 2facetruth.com.

It is important who knew what, when they knew it, and what they did about it.

If you feel that you are not equipped to debate me on the merits, feel free to put me in touch with your solicitors along with your medical liability insurance broker.

Ps - Give me 72 hours to take care of business.

BTW, although I doubt you personally knew Dr. Mengele MD, you would know that a great many medical doctors back at the time of The Holocaust could project forward to this very moment and foresee how technology would place a lot of unwanted children in the unemployment lines and soon be dependents on the State, and so they felt that nipping this problem in the bud would have medical doctors such as yourself saying thank you; and you would agree that deafening silences speak the most volume?

Do you think it is a disgrace on the Israeli or the American government that thousands of Israeli children go to sleep hungry?

By The Way, earlier I was informed about this [Council](#) of the God's

<http://www.umass.edu/defa/filmtour/sjrat.shtml>

Council of the Gods, based on actual events, tells the story of I.G. Farben, a colossal German industrial corporation that helped supply Hitler's war effort and manufactured the gas used in the Nazi death chambers. Using Nuremberg Trial records, this alarming film deals with the complicity of big business on both sides of the conflict and of scientists whose research contributed to the deaths of millions.

Most people on my email list give me their email addresses because they are looking to get something out of me for nothing and when they end up getting the truth, which they can only absorb in small doses, they shut down.
